

Total Purity Solutions

SOCOTFlex®

- The Flexible Oil Conversion On-shore

Ocean Team Group purifies technical fluid systems. Also in wind turbiness. Also on-shore. The SOCOTFlex® system gives you the freedom to plan, transport, and change various kinds of oils at a very competitive price.

Flexible and Easy

Oil conversion has become easier.

Using the SOCOTFlex® system with bladdertanks®, provides the project management with the option of allocating oil to each WTG of a site in due time before the actual oil change, leaving the service team with only efficient working time.

The bladdertanks® themselves are units of 2*400 ltr. oil. In case the work calls for additional oil, several bladder-tanks® are connected, as well as various oil types can be provided within the same job.

▲ The SOCOTFlex® Solution in action

The SOCOTflex® unit itself is a lightweight solution that can be transported on a minivan for easy reach of even remotely placed locations.

Tool to Reduce LCOE

The SOCOTFlex® system is a maintenance tool used on-site for production optimization and life extension of WTGs, reducing LCOE (Levelled Cost of Energy) by achieving an oil change on down to 4 hours pr. WTG.

Game Changer

As windfarms mature, operators scrutinize the operational performance of the turbines, stressing optimization of maintenance to optimize ROI on assets. Ocean Team Group delivers that maintenance tool.

Jens Peder Thomsen, MD and co-owner of Ocean Team Group, emphasizes: "The equipment proves to hold a competitive advantage for the onshore market".
